

DISTANCE-1.1e Revision Notes

General editorial policy

The original chapter order and main wording were preserved as much as possible. The revision primarily adds new explanatory subsections and makes a small consistency correction in the death section so that it no longer implies an absolutely zero-momentum severance.

Chapter 1 - The Continuum of Distance: No Perfect Severance

Added a new subsection defining DISTANCE as a gradient of momentum-transfer intensity rather than absolute disconnection. This incorporates the axiom that no relation in the universe has exactly zero momentum.

Chapter 2 - The Relativization of Light

Added a new subsection after the entropy/equalization discussion. Light is reframed as the most visible residue of energy-gap resolution at the human observational scale, not as the deepest ontological foundation of the universe. A cautionary sentence was included to avoid implying that the empirical role of light in modern physics is simply wrong.

Chapter 4 - The Nonexistence of Perfect Linear Motion

Added a new subsection after Circular Motion: The Failed Straight Line. The section explains that perfect straight-line motion would require a perfectly isolated two-subject universe, which cannot exist if no distance is absolutely severed.

Chapter 4 - Gravity as the Sweeping Effect of Trapped Micro-Orbits

Added a new subsection inside the motion/gravity discussion. Gravity is explained as the macroscopic observational translation of countless curved, trapped, micro-orbital momentum structures sweeping weaker surrounding momentum relationships into their curved field.

Chapter 4 - Inertia wording consistency

Slightly softened the original absolute-disconnection wording in the inertia paragraph to effective disconnection at a given scale, consistent with the no-zero-momentum axiom.

Chapter 5 - Dynamic severance correction

Changed the heading Redefining Death as Absolute Severance to Redefining Death as Dynamic Severance. Also revised two sentences so death is described as a severe biological-scale reconfiguration of momentum exchange rather than absolute severance or perfect isolation.

Compact Change Log

Location	Type	Summary
After Chapter 1, Section: The Linear Ruler and the Normalization Ratio Function	Insertion	No perfect severance / no zero-momentum relationship.
After Chapter 2, Section: Overturning Entropy	Insertion	Light as a visible residue of equalization and observational-scale bias.
Chapter 4, after Circular Motion:	Insertion	Perfect linear motion as impossible

The Failed Straight Line		idealization; real motion as curved.
Chapter 4, after Redefining Inertia and Gravity paragraph on gravity	Insertion	Gravity as sweeping effect of trapped micro-orbital momentum.
Chapter 4, Redefining Inertia and Gravity	Minor correction	Absolute severance/disconnection language softened to effective severance at the observation scale.
Chapter 5, Redefining Death section	Minor correction	Absolute severance softened to dynamic severance consistent with no-zero-momentum axiom.
